Python Developer with nearly 4 years at lobstr.io building and operating production data-collection systems — designed distributed task pipelines (Celery/RabbitMQ), a self-hosted anti-bot engine with pluggable provider-fallback routing, and auto-recovery tooling for production workers. Built and maintain 10+ of a 21-module system feeding ~786K records/week into a shared PostgreSQL warehouse. Rigorous about data quality and trusted to run systems that must not fail.

Work Experience

Python Developer at **LOBSTR.IO**, France (Remote) Oct 2022 - Jul 2026

- **Designed and built core platform infrastructure:** a self-hosted anti-bot engine with a pluggable provider-fallback router (replacing a third-party provider), plus a watchdog service auto-recovering stalled workers — running on Celery, RabbitMQ, pm2, PostgreSQL/SQLAlchemy across Google Cloud & AWS S3.
- **Built and maintained 10+ of 21 production Python modules** across two verticals — 15 French e-pharmacy price-intelligence modules and 6 luxury watch/jewelry brand modules (Chanel, Omega, Patek Philippe, Audemars Piguet, Breitling, Boucheron) — continuously adapting them to site changes and evolving defences.
- **Engineered data-quality safeguards:** automated price-drift detection, historical-gap analysis, anomaly detection, and dataset merge validation, ensuring clients always received trustworthy data.
- **Scaled data pipelines to ~786K records/week** across ~1,955 sources into a shared PostgreSQL warehouse; some modules handled 1,000+ targets each (Leclerc Drive 1,265, LeaderSanté 553).
- **Implemented anti-bot bypass logic** (Akamai, DataDome, PerimeterX) — proxy/IP rotation, CAPTCHA-solver integration — as a core, reusable capability across all modules.

Junior IT Executive at **WSDA New Zealand**, Dhaka (Onsite) Aug 2022 - Oct 2022

- **Collected, validated and managed data** supporting business development and decision-making.

Education

B.Sc. in Computer Science and Engineering, CGPA 3.12/4.00 2017 - 2022
University of Rajshahi (Rangpur Engineering College)

H.S.C. in Science, GPA 4.88/5.00 2015 - 2016
Devi Chowdhurani Degree College, Rangpur

Skills

- **Programming:** Python (Advanced), SQL, JavaScript, Regex
- **Data & Cloud:** SQLAlchemy, PostgreSQL, MySQL, Celery, RabbitMQ, pm2, Google Cloud, AWS S3, Git, Linux (Ubuntu/WSL2)
- **Other:** ETL pipelines, data-quality assurance, problem-solving
- **Web Crawling:** Requests, lxml, BeautifulSoup, Scrapy, anti-bot bypass (Akamai, DataDome, PerimeterX, CAPTCHA-solving services), proxy/IP rotation, JavaScript-rendered sites, structured-data extraction (JSON-LD, __NEXT_DATA__)

Related Projects

bazarlens — Price Intelligence Pipeline github.com/mahfujars/bazarlens
woob, PostgreSQL, dbt, Airflow, FastAPI, Docker — multi-marketplace price-intelligence pipeline over StarTech & Daraz; resumable per-category crawls with period-keyed price snapshots, price-drop detection, proxy rotation against soft anti-bot, and an analytics dashboard; Airflow fans crawls out per category.

Arogga Web Crawler github.com/mahfujars/arogga
Celery, SQLAlchemy, PostgreSQL, Requests, lxml — scraped and cleaned product data (name, SKU, price) across all categories; parallel tasks via Celery; handled pagination, rate limits, and 404s.

Sia.Ch Web Crawler (interview test at lobstr.io) github.com/mahfujars/sia
SQLAlchemy, MySQL, Requests, lxml — scraped member & office data from the Swiss engineers' registry; decrypted AES-encrypted phone numbers; handled pagination, rate limits, and 404s.

Achievements & Activities

- **Contestant** — The 2019 ACM-ICPC Asia Dhaka Regional Contest (onsite) · [certificate](#)
- **Top Earner** — Web Design & Development, LEDP Project 2020, ICT Division · [certificate](#)
- **Assistant Country Director** — International Youth Summit · **Campus Ambassador** — ICT Olympiad Bangladesh
- **References:** experience certificate & letter of recommendation from lobstr.io founder — available on request.
